Open Items

2	Description: minimized to Desktop does not maximize normally
Details: In Windows XP, if you minimize RDSS to the Desktop, you cannot maximize it again by left-clicking as expected. In Windows Vista, there is no problem.	
Workaround: In Win XP, right-click the Task bar item then select Maximize.	
Resolved:	

4	Description: Wide-screen video display cuts off bottom PP panel
Details: Widescreen aspect video displays of 1440x900 pixels display a portion of the 3 rd (analysis) panel on Past Performances (about 3 lines of data). This will be fixed to resize the PP screen so either the 3 rd panel does not display at all, or all 3 panels display optimally or are scrollable.	
Workaround: grab the lower splitbar and drag it upward to reveal more of the 3 rd panel (or just ignore the 3 rd Analysis panel and use the main Analysis screen). Eventually the software will adjust the position of all the screen objects appropriately, according to vertical screen height.	
Resolved:	

5	Description: RDSS Installation causes change to default browser
Details: Internet Explorer (IE) becomes the default browser used by RDSS (e.g. for the Desktop links) when it is first installed, despite that another browser (e.g. Firefox) may be your normal default browser.	
Workaround: (see post http://bindfold.com/forums/showpost.php?p=16276&postcount=8 - thanks JimG!) After RDSS is installed, on the Windows Start Menu go to 'Set Program Access and Defaults' and open the Custom section. For example, if you don't want (and didn't expect) IE to come up and, for example, prefer Firefox, when opening a RDSS Desktop link, in the Choose a default Web browser section, change the selection to Internet Explorer, as shown below. Close that window, then open Firefox and respond to the prompt to make Firefox the default browser. The next time you access a RDSS Desktop link, Firefox will open instead of IE.

6 Description:

1. **Details: Regional and Language Settings.** If your Windows Regional and Language Settings include a Decimal Symbol value other than dot (.) or a Digit Grouping Symbol other than comma (,), RDSS will fail to Convert data to the database and/or will not find existing data. If your Regional Settings are English (United States or Canada) and you have not Customized any settings, you will have no problems. If you have made modifications or don't use English (US and Canada), check the Samples Number display for decimal symbol = dot (.) and the thousands separator = comma (,).

The screenshot shows the Windows Control Panel with the 'Regional and Language Options' window open. The 'Regional Options' tab is active, and the 'Standards and formats' section is expanded. The 'Language' dropdown is set to 'English (United States)'. The 'Number' field shows '123,456,789.00', with red arrows pointing to the commas and the decimal point. The 'Currency' field shows '\$123,456,789.00'. The 'Time' field shows '11:47:08 AM'. The 'Short date' field shows '3/5/2007'. The 'Long date' field shows 'Monday, March 05, 2007'. The 'Location' section is also visible, with the 'Location' dropdown set to 'United States'. The 'OK', 'Cancel', and 'Apply' buttons are at the bottom of the window.

Workaround: use the default English (US and Canada) settings.

7

Description:

Details: Converting data - Workouts. Occasionally, a particular horse's workouts will fail to Convert properly to the database. During Conversion, an error message similar to the following may appear:

Please report the circumstance to Ted, noting the race card track and date. If you click on OK, the Conversion will continue, and the card should open normally, but no workouts will be available for the identified horse.

Current culprits are: ECOUTEZ REPETEZ (running at TAM), DOCTORATE (GB) running at MNR.

Workaround:

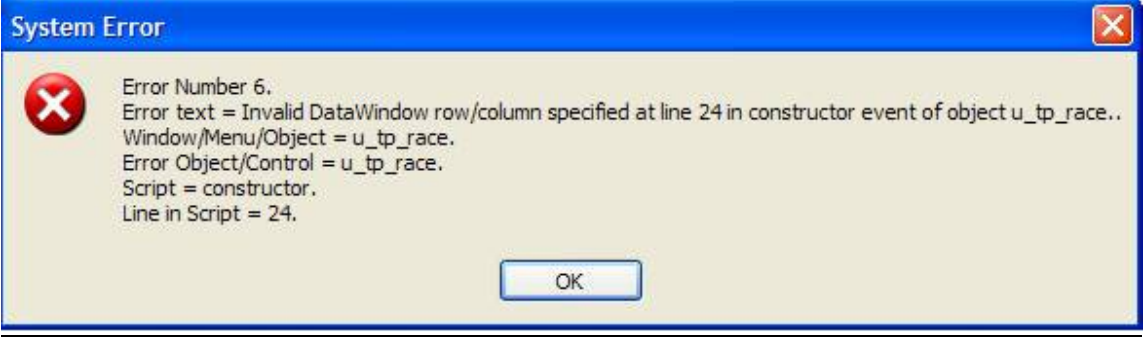

Resolved:

RDSS Bug List: Current Version - 0.97.6 (11/28/07)

12	Description: Tandems sometimes show duplicate horses
Details: When returning to a race you have previously opened, the Tandem screens for both the entire race and each horse may show duplicate values.	
Workaround: close the card and reopen it.	
Resolved:	

13	Description: Simulcast 'SP' track codes don't open properly
Details: Some tracks like LRL and PIM simulcast South American races, which are marked with a special track code: SP0, SP5, SP8, etc, and are shown as separate 'tracks' in the Cards by Date listing. While you can open these 'tracks', you will get an error message if you try to open a race.	
These races should be marked as UNPLAYABLE.	
Workaround: avoid these	
Resolved:	

14	Description: Ohio Simulcast cards don't number races contiguously
Details: Sometimes, Ohio tracks (TDN, RD) operate concurrently and a card of racing may skip race numbers (e.g. races 2,4,6,8...) Race cards with skipped race numbers like this will cause an error when you try to open them.	
	
Workaround: avoid these	
Resolved:	

RDSS Bug List: Current Version - 0.97.6 (11/28/07)

20	Description: switching Val/Spec modes doesn't flush cache
Details: when switching between Val or Spec mode, existing cached races should be flushed from the cache and the calculations recreated in the new mode, otherwise nothing changes	
Workaround: exit software before/after switching modes.	
Resolved:	

21	Description: some screen resolutions cut off the bottom of the RDSS display
Details: screen resolutions other than 1024 x 768 and 1280 x 1024 cut off the bottom row of tabs for choosing races on a card (e.g. 1440 x 900)	
Workaround: try to use a screen resolution with 1024 or higher vertical pixels (e.g. 1280 x 1024, or 1690 x 1050)	
Resolved:	

22	Description: Horse Tandem screen doesn't always show a vertical scrollbar when it needs one
Details: On the individual horse's PP screen, the Tandem Tab, sometimes the number of lines in the screen exceeds the screen's height, yet no vertical scroll bar is provided.	
Workaround: use the horizontal splitbar to left-click and hold to 'grab' it and drag it lower to make the Tandem display bigger	
Resolved:	

23	Description: Top 3 finishers data missing for each paceline
Details: 'would be nice' to see the top 3 finishers for each race (the Company line); never part of previous Sartin software, but perhaps could be added somewhere	
Workaround:
